Provide a brief explanation why any checked services were not included in the Assessment:

Part 2b. Description of Role with Payment Cards (ROC Sections 2.1 and 3.1)

Describe how the business stores, processes, and/or transmits account data.

We store encrypted card numbers only for PMS customers who choose to, and allow them to set a 'Expunge' policy for only as long as 90 days after checkout due to business needs. No swiped or CVV info is ever stored. Most customers only capture and pass on in an SSL session for authorization purposes only. For all EMV transactions, only tokenized data is stored in either BookingCenter or the EMV device.

Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.	We manage card data as per minimum business needs for hotel operations and let our PMS customers determine who – and in what detail – any card info is presented.
Describe system components that could impact the security of account data.	Possession of EMV devices, and access to secure data stored via encryption are the only components to possibly affect security.

Part 2. Executive Summary *(continued)*

Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.*
- *System components that could impact the security of account data.*

Cardholder data is stored tokenized for all EMV customers. As an encrypted pair for full card details for customers choosing to preserve access to cardholder data, expunged at intervals set by the customer, but never longer than 90 days. The critical systems that store the tokens or encrypted data -databases and web services - are maintained using industry best practices and always up-to-date components and patches, with biometric access required to access any physical device.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.

(Refer to the “Segmentation” section of PCI DSS for guidance on segmentation)

Yes No

Part 2d. In-Scope Locations/Facilities (ROC Section 4.6)

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers and mail rooms) in scope for this Assessment.

Facility Type	Total Number of Locations (How many locations of this type are in scope)	Location(s) of Facility (city, country)
<i>Example: Data centers</i>	3	<i>Boston, MA, USA</i>
Co-location facility	1	Santa Clara, CA USA

Part 2. Executive Summary *(continued)*
